OFFICERS 1991-92
ROBERT E. NELSON, *president*
TIMOTHY C. MORAWSKI, *immediate past president*
ROBERT E. ROUNDTREE, *president-elect*
ROYCE LYLES, *vice president*
C. M. PERKINS, *treasurer*
LARRY HOBART, *executive director*

DIRECTORS
D. CARL ANDERSON, *chairman*, North York Hydroelectric Commission, Ontario, Canada
WILLIAM BATCHELOR*, *city manager*, Rocky Mount, N.C.
JAMES A. BAUER*, *general manager*, Piedmont Municipal Power Agency, Greer, S.C.
RONALD W. BOLES, *vice chairman*, Electric Utility Board, Huntsville, Ala.
ROBERT CLAUSSEN, *general manager*, Alabama Municipal Electric Authority, Montgomery, Ala.
VERA B. CLAUSSEN*, *commissioner*, Public Utility District No. 2 of Grant County, Ephrata, Wash.
ELDON COTTON*, *assistant general manager of power*, Los Angeles, Calif., Department of Water and Power
OTHA COX, *member*, Utility Board, Key West, Fla.
E. LEON DAGGETT, *director of public utilities*, Hamilton, Ohio
DALE DEN HERDER, *mayor*, Sioux Center, Iowa
TERRY DRAKE, *general manager*, Kansas City, Kan., Board of Public Utilities
RICHARD M. FLYNN, *chairman*, New York Power Authority, New York, N.Y.
ERNEST GEDDES, *general manager*, Turlock, Calif., Irrigation District
TOM HELLER*, *general manager*, Moorhead, Minn., Public Service Department
EDWIN C. HOSKINS, *general manager*, Knoxville, Tenn., Utilities Board
JERRY JORDAN[1], *executive director*, California Municipal Utilities Association, Sacramento, Calif.
ROY E. KASER, *manager*, Crawfordsville, Ind., Electric Light and Power
ROBERT C. KAYTON, *director*, Loup River Public Power District, Columbus, Neb.
CURTIS J. LANCIANI, *general manager*, Littleton, Mass., Electric Light and Water Departments
ROYCE LYLES*, *managing director*, Jacksonville, Fla., Electric Authority
STEVE MEISBURG[2], *city commissioner*, Tallahassee, Fla.
THAINE J. MICHIE, *general manager*, Platte River Power Authority, Fort Collins, Colo.
TIMOTHY C. MORAWSKI*, *general manager*, Holland, Mich., Board of Public Works
WILLIAM C. MOSS, *executive director*, Tennessee Municipal Electric Power Association, Brentwood, Tenn.
ROBERT E. NELSON*, *executive director*, Denton, Texas, Municipal Utilities
FRANK L. OLSON, *general manager*, Crisp County Power Commission, Cordele, Ga.
DON A. OUCHLEY, *director of utilities*, Lafayette, La., Utilities System
C. M. PERKINS*, *general manager*, Salt River Project, Phoenix, Ariz.
ROBERT ROUNDTREE*, *general manager*, City Utilities, Springfield, Mo.
RONALD L. SAVILLE, *general manager*, Tillamook, Ore., People's Utility District
RAYMOND F. SMITH, *director of utilities*, Wallingford, Conn.
WILLIAM D. TOWERS, *general manager and chief executive officer*, Brownsville, Texas, Public Utilities Board
STEVE WACKER, *general manager*, Nebraska Municipal Power Pool, Lincoln, Neb.
GARY ZIMMERMAN, *general manager*, Michigan Public Power Agency, Kentwood, Mich.

Members of the American Public Power Association receive *Public Power* magazine as part of their annual dues payments. Additionally, a complimentary subscription goes to each chief executive officer and chief policymaking official of every nonmember public power system and rural electric cooperative in the United States. The subscription rate for others is $50 a year. Single copies cost $10 each and the January-February annual directory issue costs $90 ($50 for APPA members).
Second class postage paid at Washington, D.C., and additional mailing offices. Postmaster: send address changes to *Public Power*, c/o Circulation, American Public Power Association, 2301 M St., N.W., Washington, D.C. 20037-1484.

About This Issue

Public Power's January-February issue used to be a magazine with a directory tucked inside it. In recent years, it has evolved into an authoritative source of statistics on the public power segment of the electric utility industry. It presents a quantitative snapshot of public power, with reports on the number of utilities, kilowatt-hour sales, revenues and numbers of customers. Since 1989, we have relied on data submitted by utilities to the U.S. Energy Information Adminsitration on Form EIA 861. The EIA reports enable us to report comparable data for all utilities. We have worked closely with EIA staff over the past few years to obtain this information.

In the age of cogenerators, small power producers and independent power projects, the definition of an electric utility becomes fuzzy. An electric utility is defined as an organization engaged in the generation, transmission or distribution of electricity. In many cases, determining whether or not an organization is a utility is fairly straightforward; in others it is not. We grapple with this definition and decide each year whether or not to include certain marginal organizations. To strengthen our definition this time around, we opted for consensus: if EIA calls it a utility, and the utility files a Form 861, we will recognize it as a utility. Hence, several organizations that were not listed in these pages in previous years, are listed here now. For example, the Massachusetts Water Resources Authority and the city of Gouverneur, N.Y., each generate and sell electric power. Each of these organizations is a government entity and each reports its electricity sales to the federal government on the EIA 861. Therefore, we have included both of them in our listing of state and local publicly owned electric systems.

Our listing this year also reflects other changes: Through EIA, we learned of the existence of 16 municipal electric systems in Alaska that have not been listed in these pages previously. We have dropped from our listing a half dozen irrigation districts in Arizona that operate as self-generators—producing electricity to power their own irrigation projects. For the first time, our listing of state and local publicly owned electric utilities, the main body of our directory, which we call "the guts," includes those joint action agencies that sell power to their members. We are continuing to provide more details on joint action agencies in a separate section that begins on page 140. We have dropped from our listing several university utility operations because they function as self-generators.

The Show-Me State—Missouri—surprises us every few years with a municipal electric population that exceeds our count. This year's directory for the first time lists the cities of Ava (1,434 customers) and Willow Springs (1,164 customers). We're now aware of 91 municipal electric systems in that state. Are there more?

In the birth and death column, we have added a new system in Oklahoma—Byng, created in 1990—and we have dropped the city of Mahaska, Kan., which sold out to a private power company in 1990.

I am indebted to a solid group of colleagues who worked hard to bring this directory issue to life, especially Diane Moody, Susan Lynch, Mary Kate Wallace and Stacey Hobart. Diane worked with EIA staff to obtain 861 data, crunched numbers, checked numbers, analyzed numbers and turned them over to the magazine staff for publication. She is the author of the articles reporting on the salary survey, ratio indicators and electric utility rates. Susan meticulously maintains information published in our state-by-state and membership listings on a database, prepares the information for publication and delivers it to the magazine staff on diskette. Mary Kate honchoed the job through the lengthy and painstaking production process. Stacey made dozens of phone calls to fill information gaps and updated the municipal cable systems listing that begins on page 148. I am also indebted to Mary Rufe, APPA's librarian, who prepared the annual index to *Public Power* magazine, which begins on page 160. All of these people have worked together to produce an annual statistical issue that is a comprehensive and reliable source of information for *Public Power* readers.

Happy New Year,

Jeanne LaBella

Editor & Publisher, *Public Power*

PUBLIC POWER COSTS LESS

by Diane Moody

Residential customers of publicly owned electric power systems enjoyed average rates that were 21 percent below the rates paid by customers of investor owned utilities during 1989. Public power customers paid an average of 6.27 cents per kilowatt-hour for residential electric service, compared to 7.97 cents per kilowatt-hour paid by residential customers of privately-owned utilities.

Across the country, publicly owned electric utilities continue to lead the way in providing residential, commercial and industrial customers with low-cost energy for homes, businesses, large industry and the public.

The 1989 data presented here for rates (average revenue per kilowatt-hour) and average annual consumption per customer for residential, commercial and industrial customers of public power systems are based on information reported to the Department of Energy by 1,984 publicly owned electric utilities, which comprise virtually all of the public power sector. The 1989 expense data for public power systems cover 385 of the largest public power distribution systems. These utilities accounted for approximately 78 percent of all public power sales to ultimate customers. The data reported for privately owned utilities cover 182 major electric utilities, representing 99 percent of electricity sales to ultimate customers in the private sector for 1989.

Public power customers paid an average of 6.27 cents per kilowatt-hour for residential electric service, compared to 7.97 cents per kilowatt-hour paid by residential customers of privately-owned utilities.

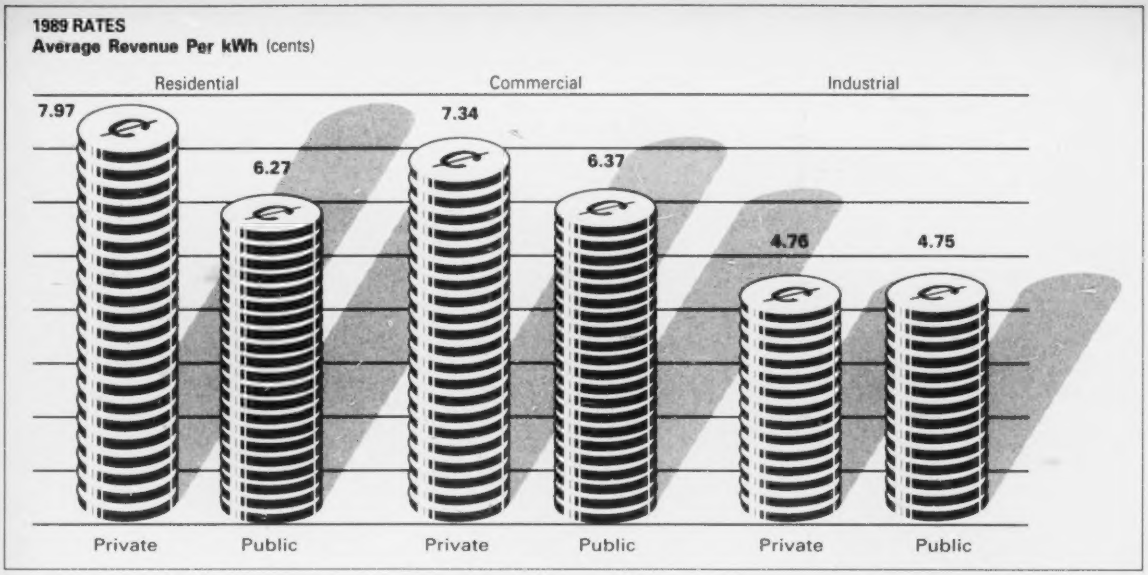
In 1989, residential customers of public power systems paid an average of 1.7 cents, or 21 percent, less for each kWh of electricity used than did residential customers of privately owned electric utilities. This represents little change from 1988, when residential customers of public power systems paid 1.65 cents, or 21 percent less, for electricity than their private sector counterparts.

Public power residential customers paid an average of 6.27 cents per kilowatt-hour in 1989, compared to 7.97 cents per kilowatt-hour for residential customers of private sector utilities. The average public power residential customer consumed 10,443 kWh of electricity in 1989, 15 percent more than the typical private sector residential customer, who consumed 9,043 kWh of electric power during the year.

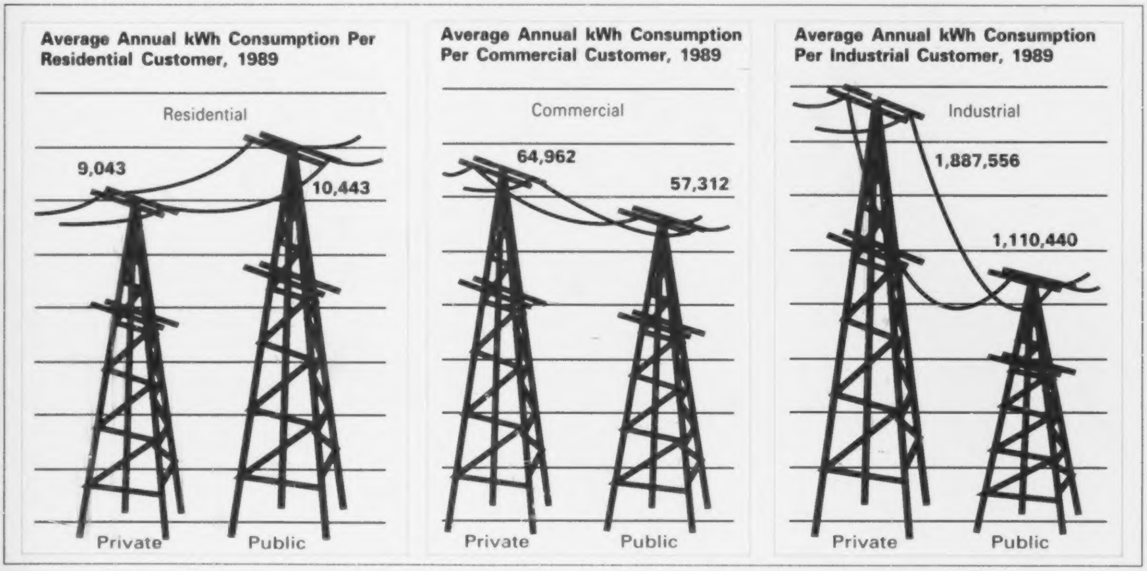
Average residential rates rose slightly for customers of both publicly and privately owned utilities from 1988 to 1989. Public power residential rates rose from 6.14 cents per kWh in 1988 to 6.27 cents per kWh the following year. For residential customers of private power systems, residential rates rose from 7.79 cents per kWh to 7.97 cents per kWh over the same time period.

Commercial customers of public power systems paid 13 percent less for electricity than private power customers in 1989. Public power commercial customers paid 6.37 cents per kWh, compared to 7.34 cents per kWh paid by commercial customers of privately owned electric utilities. Annual consumption for the commercial class averaged 57,312 kWh for public power customers and 64,962 kWh for private power customers.

Industrial customers of publicly owned and privately owned utilities paid, on average, similar rates in 1989.



1989 RATES
Average Revenue Per kWh (cents)



Average Annual kWh Consumption Per Residential Customer, 1989

Average Annual kWh Consumption Per Commercial Customer, 1989

Average Annual kWh Consumption Per Industrial Customer, 1989

Public power industrial customers paid an average of 4.75 cents per kWh and consumed 1,110,440 kWh per customer, while private power industrial customers paid an average of 4.76 cents per kWh and consumed 1,887,556 kWh per customer.

Managerial Costs Lower

Managerial costs faced by public power systems remain below comparable costs of private power companies, indicating greater efficiency of management among public power systems. Administrative and general expenses of public systems were 18 percent below those of private systems. These expenses for public power systems averaged $98 per customer, compared to $120 per customer for private power systems.

Customer accounts expenses averaged $31 per customer for publicly owned electric utilities compared to $36 per customer for private utility companies. Average customer accounts expenses for public systems are 14 percent below those of private systems.

The statistical information presented here reconfirms the experience of the 16 million customers who have made the public power choice: public power costs less.

Statistics presented here for publicly owned utilities are based on data reported to DOE on forms EIA-861 and EIA-412 for 1989. In addition, calendar year expense data for public power systems were collected on an APPA survey for those public power systems that report to DOE using a fiscal year. All data presented for privately owned electric utilities are based on information reported by the utilities on form EIA-861 and on the FERC Form 1 for 1989, and published in the annual DOE report, *Financial Statistics of Selected Electric Utilities, 1989.* PP

Diane Moody is an economist at the American Public Power Association.

SELECTED FINANCIAL AND OPERATING RATIOS

of Public Power Systems

by Diane Moody

In 1991, the American Public Power Association published its third report on financial and operating ratios. Based on 1989 data for the largest public power distribution systems, the report examined 21 categories of ratio indicators that can be used by public power systems to assess their performance relative to other utilities of comparable size or in the same geographic region. The 386 utilities summarized in the report are those that are required to file financial statements with the Energy Information Administration.

Ratios were calculated from this financial and operating data and from data reported by utilities on an APPA survey. Complete definitions and mean, median and quartile values by customer size class, generation class and region are available in the complete report, *Selected Financial and Operating Ratios of Public Power Systems, 1989.*

Revenue per Kilowatt-Hour is the ratio of total electric operating revenues from sales to ultimate customers to total kilowatt-hour sales. The ratio is calculated for all retail customer classes and separately for residential, commercial and industrial customers.

Revenue per Customer is the ratio of total electric operating revenues from sales to ultimate customers to the average number of customers. Individual ratios also were calculated for residential, commercial and industrial rate classes.

The report examined 21 categories of ratio indicators that can be used by public power systems to assess their performance relative to other utilities of comparable size or in the same geographic region.

Financial Ratios

Debt to Total Assets is the ratio of long-term debt, plus current and accrued liabilities, to total assets and other debits. This ratio measures a utility's ability to meet its current and long-term liabilities based on the availability of assets.

The major components of long-term debt are bonds and advances from the municipality. Current and accrued liabilities include warrants, notes and accounts payable, customer deposits and other miscellaneous liabilities. Total assets and other debits include utility plant, investments, debits, and current and accrued assets such as cash, working funds, and notes and accounts receivable.

Operating Ratio is the ratio of total electric operation and maintenance expenses to total electric operating revenues. This ratio measures the proportion of revenues received from electricity sales, rate adjustments and other electric activities required to cover the operation and maintenance costs associated with producing and selling electricity. Operation and maintenance expenses include the costs of power production, purchased power, transmission, distribution, customer accounts, sales, and administrative and general expenses.

Current Ratio is the ratio of total current and accrued assets to total current and accrued liabilities. This is a

Numbers shown are median values. The number of responses for each category is shown in parentheses.

measure of the utility's short-term liquidity, that is, the ability to pay its bills. The current ratio takes a snapshot of the utility's liquidity at a point in time and thus may vary considerably at other times of the year.

Times Interest Earned is the ratio of net income plus interest paid on long-term debt, to interest on long-term debt. It measures the ability of a utility to cover interest charges and is indicative of the safety margin to lenders. This ratio may be influenced by a utility's financial policies.

Net Income per Revenue Dollar is the ratio of net income to total electric operating revenues. It measures the amount of income remaining, after accounting for operation and maintenance expenses, depreciation, taxes and tax equivalents, and contributions and services, for every dollar received from sales of electricity.

Uncollectible Accounts per Revenue Dollar is the ratio of total uncollectible accounts to total electric utility operating revenues. This ratio measures the proportion of each revenue dollar that will not be collected by the utility. It will be influenced by the financial and customer service policies of the utility.

Operating Ratios

Retail MWh Sales per Non-Power-Generation Employee is the ratio of total megawatt-hour sales to ultimate customers to the total number of full-time, part-time and contract employees not involved in power generation. The ratio measures the average output in the form of retail megawatt-hour sales produced by each nongeneration employee.

Retail Customers per Non-Power-Generation Employee is the ratio of the average number of retail customers to the total number of full-time, part-time and contract employees not involved in the generation of power. This ratio measures the average number of customers served by each nongeneration employee.

Total Operation and Maintenance Expense per kWh Sold is the ratio of total electric utility operation and maintenance expenses, including the cost of generated and purchased power, to total kilowatt-hour sales to ultimate and resale customers. This ratio measures average total operation and maintenance expenses associated with each kilowatt-hour of electricity sold, either for resale or to ultimate customers.

Revenue per kilowatt-hour for all retail customers — was 5.7 cents in 1989.

Included in operation and maintenance costs are the expenses associated with power supply (generation and purchased power), transmission, distribution, customer accounts, sales, and administrative and general functions of the electric utility.

Total Operation and Maintenance Expense (Excluding Power Supply Expense) per Retail Customer is the ratio of total electric utility operation and maintenance expenses, excluding all costs of power supply, to the total number of ultimate customers. This measures the average costs associated with the sale of electricity to each retail customer. Operation and maintenance expenses include the costs of transmission, distribution, customer accounts, sales and administrative and general expenses. The costs of power supply (generation and purchased power) are excluded from the ratio.

Total Power Supply Expense per Kilowatt-hour Sold is the ratio of the total costs of power supply to total sales to both ultimate and resale customers. This ratio measures all power supply costs, including generation and purchased power, associated with the sale of each kilowatt-hour of electricity. The ratio includes operation and maintenance costs arising from all generation types, including steam, nuclear, hydraulic and other types of generation. Operation and maintenance expenses include the costs of fuel, labor, supervision, engineering, materials and supplies, and also include the costs of purchased power.

Purchased Power Cost per Kilowatt-Hour is the ratio of the cost of purchased power to the amount of kilowatt-hours purchased. This ratio measures the purchased power component of power supply costs. Purchased power includes purchases from investor-owned utilities, municipalities, cooperatives or other public authorities for subsequent distribution and sale to ultimate customers.

Production Expense per Net Kilowatt-Hour is the ratio of total production expenses to net generation. This ratio measures the power production component of power supply costs. The ratio includes operation and maintenance costs and net generation for large steam-electric generating plants. Joint action agencies and power wholesalers are included for this ratio. The 138 plants used here cover 91 separate utilities, as several utilities reported more than one plant.

Retail Customers per Meter Reader is the ratio of retail customers to the number of meter readers employed by the utility. This measures the average number of retail customers served by each meter reader.

The number of meter readers includes the total number of full-time meter readers plus half of all part-time meter readers. Population density, frequency of meter readings, and the technology or methods used to read meters will influence the ratio.

Distribution Operation and Maintenance Expenses per Retail Customer is the ratio of total distribution operation and maintenance expenses to the total number of retail customers. This ratio measures the average distribution expense associated with delivering power to each retail customer.

Distribution costs include expenses associated with labor, supervision, engineering, materials and supplies

* Median values by customer size class are not calculated for Production Expense Per Net kWh because this ratio includes observations from public power systems that are primarily wholesalers.

Numbers shown are median values. The number of responses for each category is shown in parentheses.

used in the operation and maintenance of the distribution system. The ratio will be influenced by population density and the mix of customer classes served by the utility.

Distribution Operation and Maintenance Expenses per Circuit Mile is the ratio of total distribution operation and maintenance expenses to the total number of circuit miles of distribution line. This measures the total distribution costs associated with each circuit mile of distribution line used to deliver power to customers.

Customer Accounting, Customer Service and Sales Expenses per Retail Customer is the ratio of total customer accounting, services, and sales expenses to the total number of retail customers. This ratio measures the average expenses incurred by the utility in handling each customer's account.

Administrative and General Expenses per Retail Customer is the ratio of total electric utility administrative and general expenses to the total number of retail customers. This ratio measures the average administrative and general expenses incurred by the utility on behalf of each retail customer.

Administrative and general expenses are those electric operation and maintenance expenses not allocable to the costs of power production, transmission, distribution, or customer accounting, service and sales. Items that may be included are compensation of officers and executives, office supplies, professional fees, property insurance and claims, pensions and benefits, and other expenses not provided for elsewhere.

Labor Expense per Worker-hour is the ratio of total annual earnings of full-time, part-time and contract labor employees to the total number of hours worked during the year by these employees. This ratio measures the actual cost to the utility of labor. Total annual earnings include all payroll compensation including straight-time pay, overtime pay, and payment for time not worked such as sick pay, vacation pay, holiday pay, or other payments.

OSHA INCIDENCE RATE (PER 100 EMPLOYEES)	7.92 (10)	5.03 (70)	4.20 (49)	5.11 (76)

Numbers shown are median values. The number of responses for each category is shown in parentheses.

Hours worked includes total productive hours spent at work. Hours paid but not worked, such as on holidays or other paid leave time, are not included.

OSHA Incidence Rate is the ratio of lost workday cases during the year to the total worker-hours of exposure, per 100 employees. This ratio measures the proportion of employees subject to on-the-job injuries and illnesses over the course of the year. Worker-hours of exposure are calculated by adding the total full-time and part-time annual hours worked. Lost workday cases are those which involve days away from work or days of restricted work activity because of non-fatal occupational illness or injury.

The System Average Interruptible Duration Index is the ratio of annual customer minutes off the system to the total number of retail customers served. It measures the average length of time each customer can expect to be without power during a year.

The SAIDI ratio is not included in the customer class or regional summaries on the tables above and on page 30 because the minimum outage duration used by a utility to calculate SAIDI is a more important factor influencing the ratio. The complete report provides a summary of the SAIDI ratio by minimum outage duration. **PP**

REGIONS — The regions correspond to individual or combined regions of the North American Electric Reliability Council (NERC), as described below.

Northeast — includes the Northeast Power Coordinating Council (Connecticut, Maine, Massachusetts, New Hampshire, New York, Rhode Island, Vermont) and the Mid-Atlantic Area Council (Delaware, eastern Maryland, New Jersey and central and eastern Pennsylvania).

Southeast — includes Southeastern Electric Reliability Council (Alabama, Florida, Georgia, eastern Mississippi, North Carolina, South Carolina, Tennessee, eastern Virginia).

North Central/Plains — includes East Central Area Reliability Coordination Agreement (Indiana, Kentucky, western Maryland, Michigan, Ohio, western Pennsylvania, western Virginia, West Virginia), Mid-America Interconnected Network (Illinois, Michigan's upper peninsula, eastern Missouri, eastern Wisconsin), Mid-continent Area Power Pool (Iowa, Minnesota, eastern Montana, Nebraska, North Dakota, South Dakota, western Wisconsin).

Southwest/West — includes Southwest Power Pool (Arkansas, Kansas, Louisiana, western Missouri, western Mississippi, southeast New Mexico, Oklahoma, northwest Texas) Electric Reliability Council of Texas, Western Systems Coordinating Council (Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming), and Alaska Systems Coordination Council.

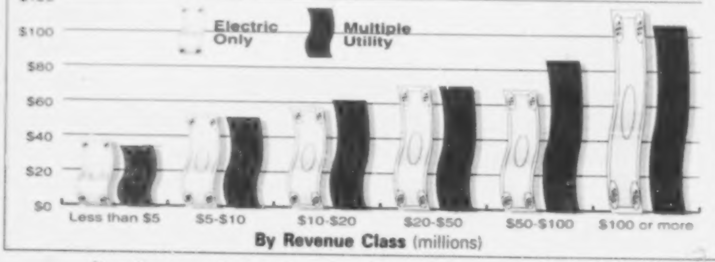
MANAGEMENT SALARIES

by Diane Moody

General managers of locally owned electric utilities earned a mean (average) salary of $50,283 as of June 1, 1991 and the median was $46,356, according to data collected by the American Public Power Association and published in its *1991 Survey of Management Salaries in Local Publicly Owned Electric Utilities.*

APPA collected data on 16 managerial occupations for public power systems with annual electric revenues of $10 million or more and on eight managerial occupations from utilities with less than $10 million. Data are based on responses of 843 local public power systems. Of the respondents, 57 percent are utilities with less than $5 million in annual electric revenues and 83 percent had revenues below $20 million. Only 7 percent of respondents had revenues of $50 million or more and 4 percent had revenues of $100 million or more.

Figure 1
General Manager - Median Salaries



The survey shows that utilities serving a larger customer base, and, hence, earning higher revenues, pay higher salaries. For general managers, median salaries range from $35,000 in the smallest revenue class (less than $5 million) to $106,500 in the largest revenue class ($100 million or more). Mean salaries for general managers range from $35,443 in the smallest revenue class to $115,276 in the largest revenue class. Table 1 shows the median salaries, by revenue class, of 16 utility occupations; Table 2 shows median salaries by customer size class.

The data show no clear trend between general manager salaries and number of utility services provided. About two-thirds of the respondents indicated that their utilities provide gas, water, sewer, wastewater or trash collection services in addition to electric power. When broken down by revenue class, median salaries of general managers in multiple utilities exceed the salaries of general managers in electric-only utilities in two revenue classes, while salaries of general managers of electric-only utilities exceed those of general managers in multiple-sevices utilities in four revenue classes, including the very smallest and the very largest. See Figure 1.

When examined by customer class, median salaries of general managers in electric-only utilities are higher than salaries of general managers in multiple utilities for the two lower customer classes. For the four higher customer classes, salaries are higher for general managers in multiple-service utilities. See Figure 2. Caution should be used in interpreting the results because both revenue and customer classes are broadly defined. Salaries for utilities in the lower end of a given class are more likely to be below the median, while salaries for utilities at the higher end of the class are more likely to be above the median.

The complete report also shows the middle range for each category. The middle range shows the high and low salaries for the middle 50 percent of respondents. In other words, 25 percent of the respondents in each class had salaries below the middle range and 25 percent had salaries above the middle range. This measure gives a more accurate indication of salary distribution than the median value.

The complete report, *1991 Survey of Management Salaries in Local Publicly Owned Electric Utilities,* can be purchased from the American Public Power Association. Copies are available to APPA members for $25 and to others for $125. To order a copy write: Publications Department, American Public Power Association, 2301 M St. N.W., Washington, D.C. 20037-1484. **PP**

TABLE 1
Median Salaries, by Revenue Class

Occupation	Revenue Class (Millions) Less than $5	$5-$10	$10-$20	$20-$50	$50-$100	$100 or More

U.S. Electric Utility Statistics

Statistics for publicly owned systems, private systems, cooperative systems and federal systems are based on Energy Information Administration Forms EIA-860 and EIA-861. Some adjustments have been made by APPA.

Number of Utilities	**(1990)**
Publicly owned systems*	2,010
Private power companies	266
Cooperative systems	951
Federal power agencies**	10

* Reflects only those utilities which file Form EIA-861 with the Energy Information Administration.
Includes Alaska Power Administration, Bonneville Power Administration, Southeastern Power Administration, Southwestern Power Administration, Western Area Power Administration, Tennessee Valley Authority, U.S. Army Corps of Engineers, Bureau of Reclamation, Bureau of **Indian Affairs and International Water and Boundary Commission. For additional information on federal systems, see page 144.

Number of Ultimate customers	**1990**	**Percent**
Publicly owned systems	16,322,655	14.8
Private	82,434,572	74.6
Cooperatives	11,656,331	10.6
Federal	24,748	0.0
TOTAL	110,438,306	100.0

Kilowatt-Hour Sales to Ultimate Customers (in millions of kWh)	**1990**	**Percent**
Publicly owned systems	400,221	14.7
Private	2,071,069	75.9
Cooperatives	200,825	7.4
Federal	54,687	2.0
TOTAL	2,726,802	100.0

Electric Revenues from Sales to Ultimate Customers (in thousands of dollars)	**1990**	**Percent**
Publicly owned systems	24,132,490	13.4
Private	140,158,333	78.0
Cooperatives	13,694,276	7.6
Federal	1,678,251	1.0
TOTAL	179,663,350	100.0

Installed Capacity (in thousands of kilowatts)	**1990**	**Percent**
Publicly owned systems	88,560	12.0
Private	548,889	74.4
Cooperatives	34,128	4.6
Federal	66,276	9.0
TOTAL	737,853	100.0

Note: Installed capacity includes adjustments for joint ownership. In prior years, these adjustments were not made to the summary data. Data reflect utilities that file Form EIA-860, plus Puerto Electric Power Authority.

Kilowatt-Hour Generation (in millions of kWh)	**1990**	**Percent**
Publicly owned systems	319,623	11.3
Private	2,112,484	74.4
Cooperative	152,231	5.4
Federal	253,430	8.9
TOTAL	2,837,768	100.0

Number of State and Local Publicly Owned Electric Utilities, By State, 1991

PROJECT 2000

GUIDING PUBLIC POWER INTO THE 21ST CENTURY

The world in which utilities operate is made up of many social, economic, environmental, and technical forces that are rapidly changing. Where is the economy headed? How is the work force changing? Where is environmental protection going? Are there new directions in electric utility industry structure? These are only some of the questions that the American Public Power Association's Project 2000 special report explores.

A year in the making, the 125-page report focuses in depth on three goals critical to public power over the decade of the 1990s.

- Preservation of the competitive viability of public power systems through responsive energy services with responsible stewardship of resources.
- Promotion of an electric utility industry structure that protects and advances the interests of all consumers.
- Enhancement of public power education, communication, and political activity to help obtain these objectives.

Project 2000 is a useful resource for utility managers and governing boards in public power planning for the 21st century. One copy has been made available to every APPA utility member. Additional copies can be purchased from APPA at a cost of $20 for members and $60 for non-members. Please allow three weeks for delivery.

Oil Water Separators FROM MC TIGHE

DOUBLE WALL

WITH STRATEGICALLY LOCATED PRODUCTION FACILITIES

PRE ENGINEERED sti-P3 PROVEN PROTECTION

BUILT TO UL-58 SPECIFICATIONS
U.S. PATENT NO. 4042512
BSA APPROVAL NO. 978-77-SM

For performance, safety, and cost effectiveness, McTighe Oil Water Separators are your best choice with models available from...**20 to 4500 GPM**.

☐Completely separates free oil & grease from discharge water ☐20 GPM to 4500 GPM flow through with larger systems available ☐High grade coated steel construction ☐Reduces effluent to below 10 PPM free oils ☐Guaranteed corrosion protection ☐Various equipment options available ☐Easy to install ☐Fully automatic

HIGH-FLOW OR LOW-FLOW SEPARATORS • PRODUCT SAVERS

Write or call for detailed information on a system that is designed and built to your specific application.

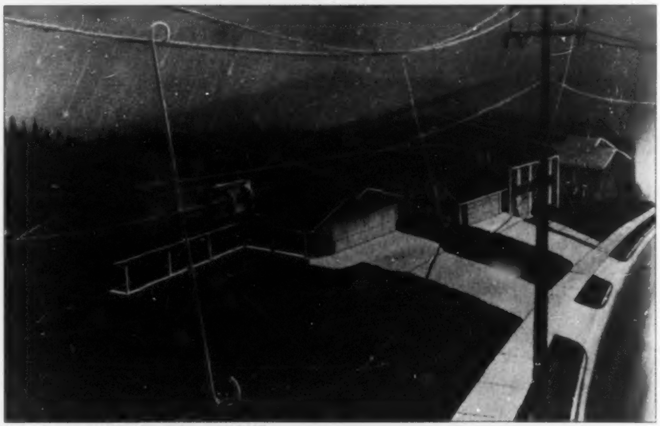
Solve your downed line hazards

Concerned about the hazards of fallen primary distribution lines? Especially in populated areas? Now Alcoa offers you a practical solution—the Falgard™ broken conductor guard.

Two to four Falgards per span will effectively ground broken conductors, protecting lives and property. Falgard contacts conductors high off the ground and makes a solid, reliable short circuit. Faults are detected quickly, and fused lines are de-energized immediately.

Falgard is available in 4' to 14' widths for various crossarm conductor separations. The product has been successfully field-tested for several years by a Florida utility.



Falgard is protected by U.S. patent no. 4,616,287

Incorporate the Falgard today into your utility's protection scheme to help guard against the hazards of fallen distribution conductors. For more information, contact us today.

Statement of Ownership, Management and Circulation

Don't spend a fortune on EMF measurement

The ELF Alert™ series of milligauss meters permit accurate, low-cost measurement of ELF/power frequency magnetic fields.

- Digital LCD display with resolution to 0.1 mG
- Accurate to 1% at 60/50 Hz
- Lightweight, pocket size, self-contained unit facilitates quick, easy measurements
- Ideal for customer service use and field surveys
- Quality made in U.S.A.
- Low cost...models start at $99.95

1991 Public Power Author Index

Anderson, Jeannine
Fuel cells get high priority in Japan.
Mar/Apr, p. 57.
Milan installing fuel cell plant.
Mar/Apr, p. 57.
Muse or siren (molten carbonate fuel cell).
Mar/Apr, p. 54.
Safe thinking.
Jul/Aug, p.35.

Bentley, Alene E.
Energizing Education.
May/Jun, p. 46.

Berg, Dave
The challenge of asbestos removal.
Mar/Apr, p. 21.

Cafruny, Madalyn
It was another public powerful week.
Jan/Feb, p. 38.

Casini, Virgil J., Collins, James W. and Myers, John R.
Preventing lineworker fatalities.
Jul/Aug, p. 20.

Ciocci, Linda Church
Finance 102.
May/Jun, p.40.

Cochran, Jacquie
Innovations: BPA using biodegradable cleaners.
Jan/Feb, p. 45.
Innovations: New breaker technology used in Florida.
Jan/Feb, p. 44.
Innovations: PUD staff telecommute.
Jan/Feb, p. 45.
Innovations: Environmental scholarships awarded.
Mar/Apr, p.58.
Innovations: Key West employees are volunteer tutors.
Mar/Apr, p. 58.
Innovations: Marketing increases Dyersburg sales 47%.
Mar/Apr, p. 58.
Innovations: Lighting retrofit saves 56 percent.
May/Jun, p.50.
Innovations: Lighting retrofit educates students.
May/Jun, p.50.
Innovations: Meter data collection okay in Oklahoma.
May/Jun, p. 51.
Innovations: Mandatory demand-side management instituted for new housing.
Jul/Aug, p. 53.
Innovations: Meters display real-time data.
Jul/Aug, p. 52.
Innovations: PV powers xeriscaping.
Jul/Aug, p. 52.
Innovations: Incentives offered for efficient windows.
Sep/Oct, p. 56.
Innovations: New customer survey tool uses bar codes.
Sep/Oct, p. 56.
Innovations: Volunteer sidewalk superintendents recruited in Ohio.
Sep/Oct, p. 55.
Innovations: Device measures EMF.
Nov/Dec, p. 49.
Innovations: Imprisoned acorns grow mighty oaks.
Nov/Dec, p. 48.
Innovations: Zero consumption check program.
Nov/Dec, p. 49.

Cox, William
Transfer policies: When to say ENOUGH!
Sep/Oct, p. 50.

Evans, Felicity W.
Looking out for number one.
Sep/Oct, p. 26.

Guttman, Dan
The negawatt revolution.
Nov/Dec, p. 38.

Harris, Glenn D.
Eagle-eyed pilot.
Mar/Apr, p. 43.
Goggles allow safe night time helicopter operations.
Mar/Apr, p. 44.

Hausman, William and John L. Neufeld
Omega: Public vs. private: A century of debate over economic efficiency.
Sep/Oct, p. 59.

Hingorani, Narain G.
FACTS for electricity.
Mar/Apr, p. 50.

Hobart, Larry
Something to Think About: The numbers of public power.
Jan/Feb, p. 6.
Something to Think About: The future for photovoltaics.
Mar/Apr, p. 6.
Something to Think About: Local energy strategies.
May/Jun, p. 6.
Something to Think About: Project 2000: A plan for the 21st century.
Jul/Aug, p. 6.
Something to Think About: Transmission access answers.
Sep/Oct, p. 6.
Something to Think About: Ideas in print.
Nov/Dec, p. 6.

Hobart, Stacey
Chronicle: APPA's Performance Management Workshop to be held Nov. 13-15.
Nov/Dec, p. 8.
Chronicle: Building code summary published.
Nov/Dec, p. 10.
Chronicle: Lightning Detection Network expanding.
Nov/Dec, p.13.
Chronicle: Matching work schedules and sleep cycles may improve productivity, safety, satisfaction.
Nov/Dec, p. 12.
Chronicle: Most power line disturbances originate at the customer's home.
Nov/Dec, p. 9.
Chronicle: Nelson is new APPA president.
Nov/Dec, p. 8.
Chronicle: NIOSH to study lineworker deaths.
Nov/Dec, p. 12.
Chronicle: Peak growth may reach 100,000 MW.
Nov/Dec, p. 13.
Chronicle: Risk management center opens.
Nov/Dec, p. 10.
Chronicle: San Antonio is site for '92 E&O Workshop.
Nov/Dec, p. 10.
Chronicle: Solar design can save money on heating bills.
Nov/Dec, p. 11.
Chronicle: Students encouraged to pursue power degrees.
Nov/Dec, p. 10.
Chronicle: Upcoming utility education courses focus on public utility accounting.
Nov/Dec, p. 8.
Chronicle: Upgraded state building codes could save enough energy to serve 70,000 households.
Nov/Dec, p. 9.
Chronicle: Utilities characterize EMF issue as serious.
Nov/Dec, p. 8.
Chronicle: Window rating group formed.
Nov/Dec, p. 8.
Chronicle: Zebra mussel video available.
Nov/Dec, p. 11.
Seattle lab wins kudos.
Nov/Dec, p. 10.

Keat, Peter
Selling efficient kilowatt-hours.
Sep/Oct, p. 46.

LaBella, Jeanne Wickline
Automating Athens.
Mar/Apr, p. 14.
Randy Hardy: in charge.
Sep/Oct, p. 41.

Lawson, Richard L.
Omega: Coal and electric power: The present and future king.
Nov/Dec, p. 56.

Lebenthal, James A.
Omega: Bonds: Talk about 'em.
May/Jun, p. 56.

Long, Larry
Omega: The continuing census.
Jul/Aug, p. 60.

Moline, Barry J.
Managing demand.
Jul/Aug, p. 46.

Mrizek, Edward J.
Palo Alto goes underground.
May/Jun, p. 16.

Price, Jeffrey P.
Gas in 2000.
Sep/Oct, p. 12.

Radin, Alex and Deborah Sliz
Omega: Should regulation give way to the market. Mar/Apr, p. 64.

Ridley, Scott
Industry restructuring: Pandora's box.
May/Jun, p. 21.
Voluntary or mandatory transmission access.
May/Jun, p. 24.

Rogers, Beth
Conquering the sun.
Jul/Aug, p. 40.
Reaching out to minorities.
Sep/Oct, p. 20.
EPA's Lighting mission.
Nov/Dec, p. 23.
Leveling the peaks with thermal storage.
Nov/Dec, p. 45.
Manageable Energy Management.
Nov/Dec, p. 20.

Rowland, R.D.
Mass Savings.
May/Jun, p. 36.

Russell, Ronald E.
Who needs PUHCA?
May/Jun, p. 29.

Steinzor, Rena I. and David R. Straus
What will the new acid rain law mean to you?
Jan/Feb, p. 20.

Strickler, John
Michigan sweethearts. Nov/Dec, p. 15.

Tuttle, Thomas C.
Strategic performance measurement. Jul/Aug, p. 16.
Concepts of performance measurement. Sep/Oct, p. 33.
Laying the foundation for performance measurement. Nov/Dec, p. 34.

Wagner, Bill
Battling stress - for safety's sake. Nov/Dec, p. 28.
Taking safety on the road. Nov/Dec, p. 26.

Wallace, Mary Kate
Chronicle: 1991 APPA National Conference will be in Nashville's Opryland Hotel. Jan/Feb, p. 12.
Chronicle: Apprenticeship program aimed at minorities. Jan/Feb, p. 12.
Chronicle: Blow-drying my hair costs how much? Jan/Feb, p.11.
Chronicle: Customers are focus of 1991 E&O workshop. Jan/Feb, p. 11.
Chronicle: DOE sponsors clean coal programs in Richmond, Indiana and Springfield, Illinois. Jan/Feb, p. 10.
Chronicle: EMF: It could be the hottest environmental issue in 1991. Jan/Feb, p. 11.
Chronicle: Human resources meeting to be held in April. Jan/Feb, p. 12.
Chronicle: Scottsdale is site of work force management workshop. Jan/Feb, p. 10.
Chronicle: PREPA will build $15 million battery energy storage facility. Jan/Feb, p. 10.
Chronicle: The CASE is not closed. Jan/Feb, p. 12.
Chronicle: Annual conference to be held in Nashville, Tennessee. Mar/Apr, p. 11.
Chronicle: Economic development is focus of UEC. Mar/Apr, p.10.
Chronicle: JEA wins environmental award from city. Mar/Apr, p. 10.
Chronicle: Seattle lights up to cut crime. Mar/Apr, p. 11.
Chronicle: Today's light bulbs aren't what they used to be. Mar/Apr, p. 10.
Chronicle: Zebra mussel imposter is on the loose. Mar/Apr, p.10.
Chronicle: 55 utilities win safety awards. May/Jun, p. 12.
Chronicle: Advanced lighting handbook available. May/Jun, p.14.
Chronicle: APPA develops energy strategy response. May/Jun,p. 13.
Chronicle: EPRI introduces EMF risk communications handbook. May/Jun, p.15.
Chronicle: EPRI, others form wind consortium. May/Jun, p. 13.
Chronicle: In Espanola, Ontario, sit back and watch your bills go down. May/Jun, p. 15.
Chronicle: Now you see it, now you don't. May/Jun, p. 12.
Chronicle: Phillips, Runyon will speak at National Conference at Nashville. May/Jun, p. 14.
Chronicle: Public Power Week observance in its fifth year May/Jun, p. 15.
Chronicle: Short supply threatens lighting programs. May/Jun, p. 13.
Chronicle: Tree power: 16 million trees. May/Jun, p. 13.
Chronicle: UECs: Retail rates, executive development. May/Jun, p. 14.
Chronicle: APPA recognizes individuals, cities, with top honors. Jul/Aug, p. 12.
Chronicle: California IOUs decide not to merge. Jul/Aug, p.11.
Chronicle: A cool plan from Ontario Hydro. Jul/Aug, p. 14.
Chronicle: Pierre, S.D., converts old power plant to science center. Jul/Aug , p. 11.
Chronicle: Randall Hardy is new APPA president. Jul/Aug, p.10.
Chronicle: Senior executives, cable TV, are focus of upcoming UECs. Jul/Aug, p. 10.
Chronicle: Solar bulletin available. Jul/Aug, p. 14.
Chronicle: Westinghouse will open new transformer plant. Jul/Aug, p. 10.
Chronicle: Will hydrogen be the new wonder fuel? Jul/Aug, p.10.
Chronicle: Back by popular demand: The switch, the bulb, the outlet. Sep/Oct, p. 9.
Chronicle: Energy-efficiency upgrades in Pacific Northwest could save millions. Sep/Oct, p. 10.
Chronicle: Glasgow, New York Power Authority and Pasadena win Innovator Awards. Sep/Oct, p. 11.
Chronicle: Improving internal customer relations is AFRIS Workshop topic. Sep/Oct, p. 10.
Chronicle: Nuclear future rests with feds. Sep/Oct, p. 10.
Chronicle: Territorial battle bites the dust. Sep/Oct, p. 8.
Chronicle: UECs will highlight demand-side management, distribution, accounting. Sep/Oct, p. 8.
Chronicle: Utility officials reveal concerns in survey. Sep/Oct, p. 8.
Chronicle: Vic Reinemer, former Public Power editor, dies. Sep/Oct, p. 8.

Watkins, T.H.
Monograph: Righteous Pilgrim, the life and time of Harold L. Ickes, 1874-1952. May/Jun, p. 52. (Book review)

Woolbright, Shane
Omega: Prosperity is just around the corner. Jan/Feb, p. 48.

Yergin, Daniel
The prize, the epic quest for oil, money & power . Mar/Apr, p. 60. (Book review)

1991 Public Power Subject Index

ACCOUNTING
Hobart, Stacey. Chronicle: Upcoming Utility Education Courses focus on public utility accounting. Nov/Dec, p. 8.

ACCOUNTING, FINANCE, RATES & INFORMATION SYSTEMS SECTION/ WORKSHOP
Wallace, Mary Kate. Chronicle: Improving internal customer relations is AFRIS Workshop topic. Sep/Oct, p. 10.

ACID RAIN
Steinzor, Rena I. and David R. Straus. What will the new acid rain law mean to you?. Jan/Feb, p. 20.
Radin, Alex and Deborah Sliz. Omega: Should regulation give way to the market. Mar/Apr, p. 64.

ADVERTISING AND PUBLIC SERVICE ANNOUNCEMENTS
Wallace, Mary Kate. Chronicle: Back by popular demand: The switch, the bulb, the outlet. Sep/Oct, p. 9.

AIR QUALITY
Wallace, Mary Kate. Chronicle: JEA wins environmental award from city. Mar/Apr, p. 10.

ALLIANCE TO SAVE ENERGY
Hobart, Stacey. Chronicle: Upgraded state building codes could save enough energy to serve 70,000 households. Nov/Dec, p. 9.

AMERICAN ASSOCIATION OF NURSERYMEN
Wallace, Mary Kate. Chronicle: Tree power: 16 million trees. May/Jun, p. 13.

ANNUAL CONFERENCE (APPA)
Wallace, Mary Kate. Chronicle: 1991 APPA National Conference will be in Nashville's Opryland Hotel. Jan/Feb, p. 12.
Wallace, Mary Kate. Chronicle: Annual conference to be held in Nashville, Tennessee. Mar/Apr, p. 11.
Wallace, Mary Kate. Chronicle: Phillips, Runyon will speak at National Conference at Nashville. May/Jun, p. 14.

FCC License Application Services

Our Enhanced Application Service professionals will prepare and file your FCC land mobile and microwave license applications, and FAA Form 7460-1, all at very reasonable rates. Included at no additional charge:

- **Regular status checks**
- **Post-grant requirements**
- **FCC/FAA Consultations**
- **Channel searches**

Assistance with rule waivers, STAs, path profiling, planning and system design is also available. Call us before your next licensing project. To receive a brochure and price list, please call or write to
